

FROM THE MTF SEPARATING PROGRAMME: THE ALLROUND-SEPARATOR

**MTF Multi-Separator
MSL-600**

The **MTF Multi-Separators MSL and MSR** are the perfect assistants for your production, when dealing with separation of injection moulded parts and runners. In particular they are useful when little space is available and a flexible operation at various machines is required.

Due to their elaborate design, they are easily and quickly adapted to different part geometries.

Benefits

- Quick and convenient setup for various part geometries
- Easiest operation
- Quick machine setup without tools
- Perfect separation results due to exact adjustment options and screw surfaces adapted to the task
- Screw with double-sided support for highest precision
- Polyester wiper mounted above the screw to prevent parts from being pulled over the screw
- Nonwearing drive unit by means of a drum motor
- Highest working safety due to prevention of dangerous points and intelligent switch-off-electronics
- Short delivery times

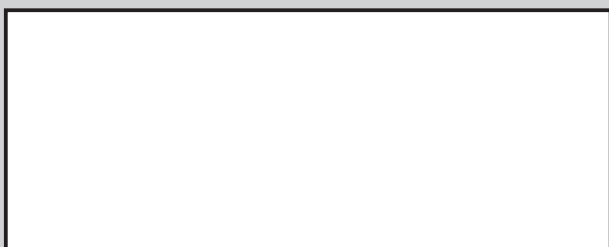

MSL-800 with box support

MSR-600 with double screw for die-cast parts

Technical Data

- Available with right- or left-sided discharge with a separation length of 600mm or 800mm
- Drum motor with torque monitor, 30W output, 230V/50Hz connection
- 7 speed levels between 15 and 92 U/min
- 230V/50Hz electrical connection
- Moveable carriage type HE 010 from the Multi-Tech series for easy adjustment of height and inclination
- Screw roller made of PVC with a free or firm screw available in various materials and heights
- Screws of steel and stainless steel available as an option
- Equipment of the screw roller with spikes for loosening separation goods that tend to interlock
